

JavaScript Project Revision Notes

Project 1: Calculator

Project Goal

Build a calculator that can display numbers, perform +, -, *, / operations, clear the screen, and calculate answers.

HTML Structure

Calculator -> Display -> Buttons (0-9, +, -, *, /, ., C, =). Use an input for the display and button elements for the keys.

CSS Checklist

Style the calculator container, display, and buttons. Consider width, padding, font size, alignment, grid layout, spacing, and cursor.

JavaScript Steps

1. Select the display.
2. Select all buttons.
3. Loop through buttons.
4. Add click events.
5. Get button value.
6. Handle numbers/operators.
7. Handle C.
8. Handle =.
9. Update the display.

Concepts to Revise

querySelector, querySelectorAll, forEach, addEventListener, if/else, variables, strings, DOM manipulation, += operator.

Project Flow

User clicks a button -> Get value -> Is it C? Clear. Is it =? Calculate. Otherwise append to display.

Developer Notebook

Keep four sections:

1. Concepts Used
2. Project Flow
3. Common Mistakes
4. What I Learned

Challenge

Build the calculator without copying code. Think first, code second, debug third.
